

JRC Mechanical and Youth Registered Apprenticeship
Chesapeake Career Center

JRC Mechanical is currently part of a building team that is constructing a state of the art cancer research and treatment center that will be a focal point in the fight against cancer. JRC is providing the mechanical and plumbing system install for this project. Recently JRC was lucky enough to hire what we think are five of the finest young men who attend the Chesapeake Career Center. They come equipped with a 10 hour OSHA card, Universal CFC card (the designation that means they are handling Chlorofluocarbons safely) and a wealth of knowledge bestowed by a most energetic instructor by the name of Michael Thompson. These young employees will be exposed to some of the finest and most innovative and leading edge construction techniques available.

They will witness, first hand, ground up construction of some of the most complex systems and tenant modifications this area has seen. They will see how a building is built, commissioned and put into service. Most construction workers will never see a project like this in their entire career. The important message here is that we have 5 young people who have chosen this career path and will work with the finest mechanics in Hampton Roads that will pass on their trade knowledge and further replenish our shrinking labor pool.
